Add a workspace (V1).

Join a workspace starts with an Email sign-in instead of the workspace URL to make it easier for users to recall their account information in a more step-by-step approach

Minimalist design--easy to see what options there are because slack offers so many options at one time that users get confused

Sending a magic link.

send me a magic link!

User accesses all their linked workspaces under different emails/companies easily by logging into their main account.

can select several

Add a workspace (V2).

Instead of logging into several workspaces through multiple emails, having an overarching account that contains all workspaces under multiple emails can make the whole sign in process easier. Signing into multiple devices under one account makes it easier for users to join all their workspaces quickly.

Add a workspace (V2).

User clicks on the plus no right click, icon moves button under other according to how many workspaces there are on workspaces the sidebar Feedback: Background dims, and an overlay pop-up displays showing "add a

workspace"

password is inputted

green when username/ when both fields are

filled, the button

green

changes from grey to

workspaces as they can recall a single set of username/ password much more easily than multiple workspaces/emails.

Trigger: user clicks box

sync across platforms.

only accessible if users

have an account with

slack (logged in)

user clicks button

takes user to a new

screen, loading and

syncing all devices

Feedback:

workspaces to join Feedback: box is checked and if user closes the screen, the workspace will be added
